Job Summary:

We are looking for a skilled and detail-oriented Telco Installation Technician to install, maintain, and repair telecommunications equipment and infrastructure, including cabling, routers, switches, and other communication systems, ensuring their proper functionality and customer satisfaction.

Job Requirements:

- Telco installation technician must live within 1 hour's drive in the city area they serve, remote candidates will not be considered.
- Candidate needs to be proficient in using email, managing telco documentation, and navigating large excel spreadsheets.
- Candidate must have good English writing and speaking skills.
- Candidate must have the necessary tools needed for standard Telco Central Office/MSC/MTSO equipment installations with +5 year's experience.
- Candidate must be proficient seamlessly moving documents and information between a mobile phone and laptop.
- Candidate must be able to console into telco equipment using a console cable and PUTTY software.
- Candidate must be proficient at using optical test gear, such as a Fluke Quad, and testing optical circuits end to end in a telco office.
- Candidate must be proficient and installing a variety of data cables in an existing structured cabling system.
- Candidate should be proficient and terminating ground cables and basic power terminations to PDUs and DC power cabling for 48v systems.
- Candidate must know how to navigate cabling naming conventions to determine cabling runs and produce all necessary cable labels.
- Candidate must have experience racking equipment, cable managers, data cabinets and telco relay racks with earthquake bracing if needed.

- Candidate must know how to work in a production environment where their actions have the potential to cause customer outage and understand how to avoid them.

This will not be a full-time position with benefits, these people will work on behalf of Saturn.
